

TASK A

Website analyzed: mallistore.com (Malli)

1. *Meta information*

The page uses `<!DOCTYPE html>` and the website is an online clothing store called Malli. The page contains a search field, navigation menu, product categories, collection links and a product catalog.

The page also contains information about the number of products, filters for price, size, color and composition, as well as sorting options. For example, the catalog contains categories such as dresses, trousers, corsets and tops, accessories, jackets, skirts and outerwear.

2. *Semantic Structure*

The page contains several different sections of content. The main catalog area contains product information, filters and sorting controls. The navigation includes links to different product categories and collections, such as “Archive sale”, “Выпускной”, “New Collection” and “Special price”.

The page also contains product cards with the product name, composition, availability, price and a “В КОРЗИНУ” button. For example, products such as “Платье Passiona” and “Платье Toujours” are displayed with their prices and availability.

However, from the page structure available to me, I cannot reliably determine the exact HTML semantic tags used internally, such as whether specific blocks are implemented with `<section>`, `<article>` or `<div>`.

3. *Forms and Tables*

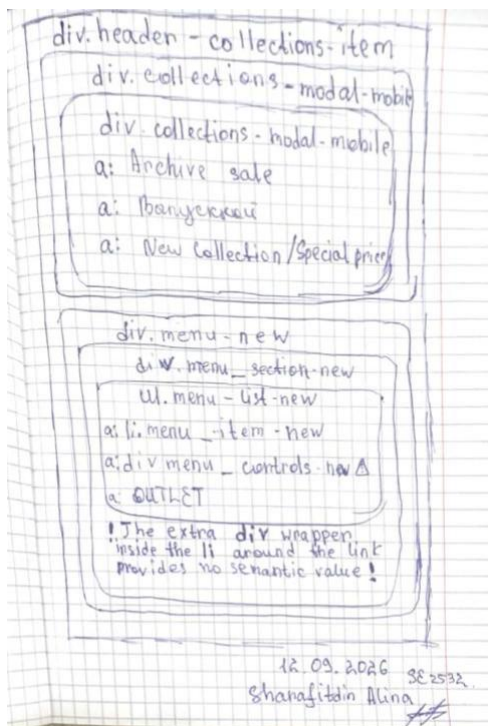

The page contains several interactive form controls. There are input fields for the minimum and maximum price, size, color and product composition. There is also a sorting control with options such as “По умолчанию”, “по возрастанию цены”, “по убыванию цены”, “сначала новые” and “по названию”.

No actual `<table>` is visible in the catalog content. The product information is displayed as individual product items rather than as a table.

4. Hand-drawn Sketch Revised based on the actual sketch image:

The collections block (`div.header-collections-item` → `div.collections-modal-mobile` → links: Archive sale, Выпускной, New Collection, Special price) matches the real markup

closely. The real code adds one extra wrapping layer (`div.modal-list`) not shown on the sketch, and treats "New Collection" and "Special price" as two separate links rather than one combined item — minor simplifications, not errors. The second block on the sketch (`div.menu-new` → `div.menu-section-new` → `ul.menu-list-new` → `li/div.menu_controls-new` → `a: OUTLET`) does **not** appear anywhere in the analyzed HTML. The provided source ends within the header, before any such menu block. This part of the sketch likely documents a different section of the page (e.g., the side/main navigation menu) that wasn't included in the HTML sample — it should be labeled as unverified rather than confirmed. The note "the extra `<div>` wrapper inside the `<li>` around the link provides no semantic value" is a valid and well-reasoned observation about a common anti-pattern, but again can't be checked against this particular code sample.

Error 1 — Invalid/broken attribute

```
<button 111 type="button" class="button button_size-s header__show-menu-btn ...">
```

Do you see the **111** directly after `<button>`? This is not a valid HTML attribute — it is simply a piece of unnecessary text that was accidentally left in the code (perhaps the developer forgot to remove it during the layout process, or it was a build error). The W3C validator would definitely mark this as a parsing error.

Error 2 — Links without accessible text

```
<a href="/favorites" class="header__control-btn header__favorite">
  <span class="icon icon-favorites-custom in-modal"></span>
</a>
```

The link contains only a `<span>` with an icon — there is no text, `aria-label`, or `title`. For a screen reader, this link would simply be announced as “link” without explaining that it leads to the “**Favorites**” section. The same problem occurs with the cart:

```
<a href="/cart_items" class="header__control-btn header__cart">
  <span class="icon icon-cart-custom in-modal">...</span>
</a>
```

This is an accessibility issue — the link does not have a clear and understandable purpose.

Error 3 — Too many `<div>` elements instead of semantic tags

```
<div class="header__area-show-menu">
  ...
<div class="logo-block">
```

The website’s header structure is built almost entirely with `<div>` elements and CSS classes instead of semantic tags. Although there may be one `<header>` wrapper above, the internal structure — including the menu, search, and logo — is mostly built using `<div>` elements.

TASK B

A web page is a document created with HTML. It contains different elements such as headings, paragraphs, images, links, tables, and forms. When I open my HTML files in a browser, the browser reads the code and interprets the tags. It then displays the content as a structured page that the visitor can see and interact with.

In my `lookbook.html`, I used the `<section>` tag for “Product Categories” because it groups related content. I used `<article>` for “Tops” and “Dresses & Bottoms” because they are separate content blocks. I also used `<aside>` for the “Sizing Tip” because it contains additional information related to the main content. In my `reviews.html`, I used `<article>` for each customer review because every review is an independent piece of content.

When a visitor presses the “Send request” button in my `lookbook.html`, the browser checks the required fields in the form. However, the information is not actually sent or saved because the form uses `action="#"` and there is no server-side processing yet.

Lookbook

The instyle zh2 clothing store offers a wide range of clothing. High-quality clothing and reasonable prices. The store currently has a new autumn collection. The main items are coats, jackets, leather jackets, as well as stylish cardigans and sweaters. The entire product range is very well organised in the store, making it easy to find what you're looking for. The main materials are knitwear, tweed, corduroy, leather, and suit fabric. In addition to all this, the store is full of accessories to complete your look. Such as glasses, hats, handbags, scarves, socks, and so on. The store is offering good discounts on items from the previous collection. In addition to all this, I liked the atmosphere in the store itself - it's calm and quiet, with a beautiful interior and concept. The top sellers are **the grey mini skirt and the shirt with an unusual style** while the *new arrival of the season* is the autumn coat line. Jump straight to the [size chart](#)

- Outerwear

Sizing Tip

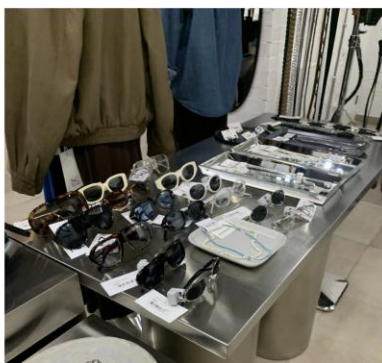

If you're stuck between two sizes, go bigger — fabric can shrink after washing.

Size Chart

Instyle.zh2 t-shirt size chart
(real measurements)

Size Chest, cm Length, cm

S	88	60
M	92	63
L	96	65

How to Measure Yourself Correctly

1. Wrap a measuring tape around your chest at its fullest point.
2. Measure the length from the shoulder to the desired hem.
3. Compare against the table above.

Oversize

A loose cut, 1–2 sizes bigger than usual.

Slim fit

A fitted cut that follows the body's silhouette.

Sizes are given in cm and are real product measurements, not conventional "EU sizes" — this makes it easier to compare models, etc. The price tag already reflects the seasonal discount¹.

Customer Reviews

[The store actively maintains Instagram and tiktok accounts. But they don't often post their customer reviews there. The largest number of reviews in 2gis. There are a lot of bad reviews, Mostly focused on the quality of clothing, as well as reviews about how much choice there is in the store, what stylish clothes. That there are interesting positions for a reasonable price. But not all people talk about the store's employees in the same way, how attentive they are, always ready to advise and help with the choice. I also saw a review from a regular customer who is pleased with every new assortment. People also note that there are often discounts here and you can buy seasonal, high-quality clothing at a low price. I've seen this for myself — beautiful jackets and coats were half price. I think their main advantage, and why they have such good reviews, is due to the quality, the wide range of products, and the prices. Jump straight to the [2gis.ZH2](#) if you like.]

Real Reviews

Amina Kuanysheva

Недавно заходили с подружкой и смогли найти для себя очень стильные вещи хорошего качества, очень помогли девочки консультанты, особенно Самал. Остались в хорошем впечатлении и приобрели пару вещей, будем заходить ещё 🌟🌟

xxx Xx

К одежде претензий вообще нет, очень люблю этот магазин и давно покупаю у вас. Но не понравилось качество обслуживания. Если бы помогли подобрать размер, не зависимо от модели, приобрела бы побольше вещей.
